MOTIVATIONAL LETTER

From the first moment I saw "Hello World" in the console of my first app, it got me hooked on the world of programming.

Programming is not just a job for me, programming has allowed me to grow as a person - in a personal and professional sense.

It allowed me to continuously learn and grow, and challenging situations taught me how to think like a developer.

What started with the first "Hello World", today has become something I love to do, my life path, and my passion.

Throughout my work experience, I have been involved in various jobs that have also influenced my personal and business development, which you can read more about in my CV.

I learned what it means to be part of a team and the importance of teamwork.

I also believe that I am persistent and that I do not give up on my goals so easily. As important as teamwork is, equally important is the ability to work independently, which I believe I possess.

I am a person ready for challenges, to learn new and to improve already existing programming languages and tools.

I put maximum effort into the tasks, I am hardworking and I do not give up on the tasks, regardless of the time required to solve them.

I sincerely hope that you will give me the opportunity to introduce myself personally and that, given my knowledge, experience and special desire for constant progress (professionally and personally), you will consider me a qualified candidate.

For all other questions, feel free to contact me.
